AB	The invention concerns the prepn. of cosmetic and pharmaceutical microcapsules and nanocapsules in a <b>micromixing</b> device under laminar flow conditions; the encapsulation is performed according to known methods, e.g. <b>phase sepn.</b> , <b>polymn.</b> , solvent evapn., hydrogel formation, using wax and lipid melts, etc. Applying the <b>micromixing</b> technique decreases the amt. of emulsifier or no emulsifier is required. Various substances are encapsulated by the method, e.g. cosmetics, enzymes, dietary supplements, adhesives, antibiotics, antimicrobial agents, fungicides, vitamins, cells, nucleic acids, etc. Thus for the encapsulation of .beta.-carotene in paraffin a heatable micromixer comprising a 25 .mu.m diam. mixing chamber capillary was used in conjunction with two HPLC pumps; flow rate was set to 10 mL/min. 0.5 G .beta.-carotene were dissolved in 50.0 g paraffin (m.p. 44-46.degree.C) at 60.degree.C; the soln. was mixed in the micromixer with water at a ratio 1:5 while maintaining 50.degree.C. The paraffin-water dispersion was pumped into 1 L ice water; the formed paraffin drops with the encapsulated paraffin were measured by dynamic light scattering; the particle size distribution was 30-140 .mu.m.
